% means one form is contained in the other, they are not considered as identity.

No disjunction

5/40 language families lack a marker for disjunction

No question embedding

7/40 language families lack question embedding as a whole 'no indirect speech'

AAB group

15/40 language families have identity between their conditional and embedded polar question markers

ABB group

5/40 language families have identity between embedded polar question and disjunction markers

AAA group

Only one language family has identity between all three forms.
